

The Interstate Traveler Project

MAGLEV RAIL & HYDROGEN DISTRIBUTION NETWORK

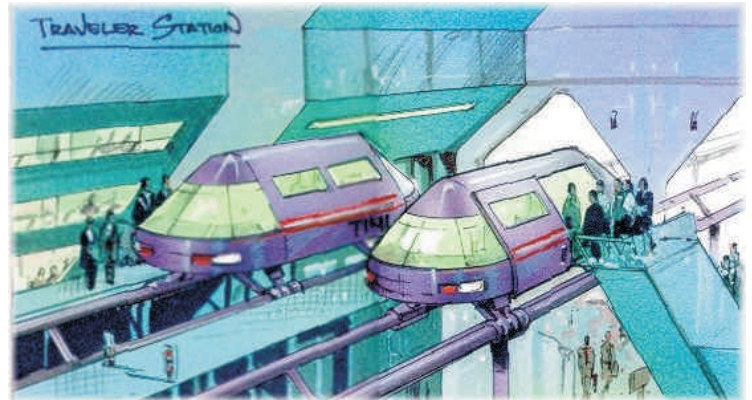

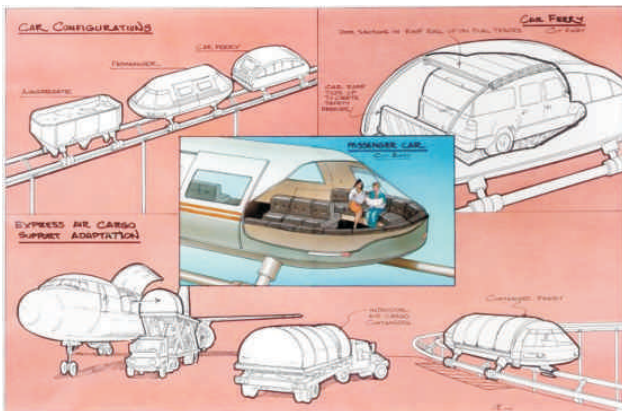

Press Release

Dec 10th 2002

The Interstate Traveler is the solution for solar/hydrogen powered maglev rail mass transit. By these plans, we intend to create America's most advanced public utility service moving people, products, automobiles and energy.

CLEAN, QUIET, SAFE, RELIABLE AND FAST!

The Interstate Traveler provides the worlds first switchable maglev rail network that acts to provide inter-urban/inter-city pedestrian and automobile transit services while simultaneously producing, storing and distributing hydrogen as an alternative energy resource. All Interstate Traveler features are fully automated using TCP/IP technology such as automatic routing.
